Databases: PostgreSQL, MySQL, SQLite

Data Analysis: Analyzing complex datasets to extract actionable insights.

Teamwork: Effectively collaborates with cross-functional teams.

Communication: Strong verbal and written communication skills.

Problem-Solving: Proficient in identifying issues and finding solutions.

SUMMARY

Aspiring Python developer with a focus on Django and Flask web development, and a solid background in computer science. Currently studying computer science at St. Mary's University, I have a strong interest in creating dynamic and user-friendly web applications.

In addition to web development, I also have skills in data analysis. I can work with complex data to find useful insights, which can help in making informed decisions. My web development and data analysis skills are separate, but I am committed to doing my best in both areas.

I am eager to apply and grow my skills in both web development and data analysis, whether it's building reliable web applications or analyzing data to provide valuable insights.
